

Web Research, Data Mining and Data Entry for a US Company

The Situation

A world renowned media & consulting firm wanted a vendor who can go over their Master Service Agreements and Statements of Work entered with various clients. They wanted the vendor to extract specific data after a thorough analysis of the agreements and then this data had to be entered into a database.

The Solution

This US Company approached us as Devott Service has market leadership in the field of Data Mining / Data Abstraction and Data Entry jobs. We have executed similar kind of projects successfully for academic institutions, major corporations, solicitors and government bodies. For the successful execution of the project, we carried out a pilot run with some of our SMEs (Subject Matter Experts) to have a better understanding of the project.

In the data mining and data entry phase, our SMEs marked the specific data in soft copies first and this data was then entered in the application. The final database passed through a QA phase to ensure accuracy.

The Result

Devott Service received tremendous praise from the client for the work executed well. In fact, they are thinking of utilizing Devott Service's data extraction / web research services again for the next round of agreements if their analysis turns out to be successful.

[Contact us](#) with your Online Data Research & Data Entry requirements and we will get back to you within one business day.
